HOW TO FORMULATE WITHOUT WATER

# WATER CRISIS :

Water covers 70% of our planet.

Only 3% of the world's water is fresh water and two-thirds of that is tucked away in frozen glaciers or otherwise unavailable for our use.

90% of all natural disasters are water-related.

80% of wastewater flows back into the ecosystem without being treated or reused.

1.1 billion people worldwide lack access to water, and a total of 2.7 billion find water scarce for at least one month of the year.

By 2025, two-thirds of the world's population may face water shortages.
